

Contents

1 Gröbner Basics	1
1.1 Introduction	1
1.2 Motivation	2
1.3 Gröbner bases	4
1.4 Buchberger's algorithm	8
1.5 Tutorial 1	10
1.6 Solutions to Tutorial 1	14
2 The Gröbner Fan	20
2.1 Introduction	20
2.2 Some more Gröbner facts	20
2.3 Polytopal basics	22
2.4 The Gröbner fan	25
2.5 Further reading	32
2.6 Tutorial 2	32
2.6.1 Polytopes and cones	32
2.6.2 Gröbner fan and state polytope	32
2.6.3 The Gröbner walk	34
2.7 Solutions to Tutorial 2	35
2.7.1 Polytopes and cones	35
2.7.2 Gröbner fan and state polytope	37
2.7.3 The Gröbner walk	40
3 Toric Ideals	42
3.1 Introduction	42
3.2 Toric ideals	43
3.3 Algorithms for toric ideals	45
3.4 Universal Gröbner bases for toric ideals	47
3.5 Tutorial 3	50
3.6 Solutions to Tutorial 3	54
4 Triangulations	60
4.1 Background on triangulations	60
4.2 The connection with initial ideals of $I_{\mathcal{A}}$	62
4.3 The secondary fan and the Gröbner fan	63
4.4 Further reading	66

4.5	Tutorial 4	67
4.6	Solutions to Tutorial 4	69
5	Resolutions	76
5.1	Basics of minimal free resolutions	76
5.2	Free resolutions of toric ideals	80
5.3	Tutorial 5	86
5.4	Solutions to Tutorial 5	88
6	Connections to Algebraic Geometry	93
6.1	Introduction	93
6.2	A brief introduction to toric varieties	93
6.3	The Cox homogeneous coordinate ring	95
6.3.1	Projective space	95
6.3.2	Construction of homogeneous coordinate ring	96
6.3.3	Quotient construction	97
6.3.4	Homogeneous coordinate ring and algebraic geometry	98
6.4	Open questions on normality	99
6.4.1	Degrees of Gröbner bases	99
6.4.2	Projective normality	99
6.4.3	Quadratic generation	100
6.4.4	Higher syzygies	100
6.5	Further reading	101
	Index	102
		104
	Bibliography	104
